Our HIP Signage is designed to provide a flexible and cost-effective sign choice for your interior needs. This system offers a lightweight frame, made from High-Impact Polymers, which utilizes a single or multiple acrylic panel solution to allow for changeability in the messaging area. Changes are easily made by removing the acrylic panels with the provided suction cup.

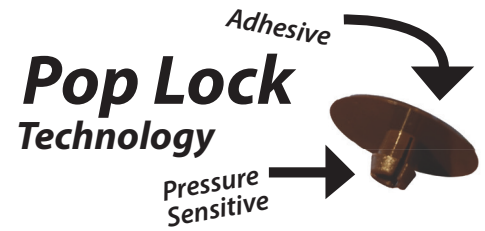

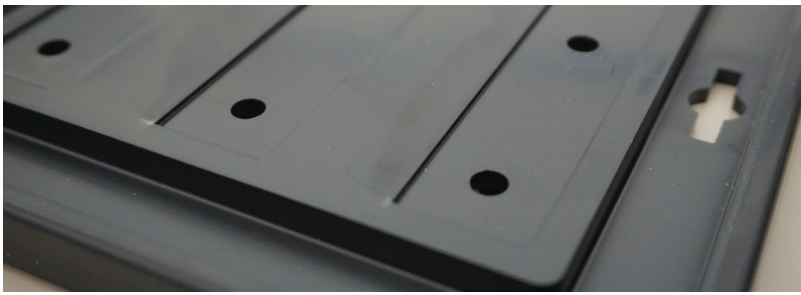

This system recognizes the need for an easy and clean installation with no visible mounting fasteners. Now, you no longer need to worry about damaging your walls with adhesive silicone or tape, instead use the provided keyhole mount on the back of the sign.

All signage is designed, manufactured and assembled in the USA.
